

AqBanking - Bug #204

Automatically rejecting certificate / Peer cert not accepted

25.03.2020 10:35 - DieterK

Status:	Closed	Beginn:	25.03.2020
Priorität:	High	Abgabedatum:	
Kategorie:	AqBanking	Anwendung:	aqbanking-cli
Betriebssystem:	Linux	Version der Anwendung:	
AqBanking-Version:	6.1.4		
Beschreibung			
AqBanking suddenly stopped working today.			
I now only see the following error messages:			
<pre>#aqhbc-tool4 getbankinfo -u 1 5:2020/03/25 10-22-47:aqbanking(14748):siotlsect.c: 229: Found matching certificate "2B:44:72:60:51:3F:02:E5:59:3B:D2:FC:C9:B7:41:6D" with same status 5:2020/03/25 10-22-47:aqbanking(14748):siotlsect.c: 255: Automatically rejecting certificate [2B:44:72:60:51:3F:02:E5:59:3B:D2:FC:C9:B7:41:6D] (-108) 3:2020/03/25 10-22-47:gwen(14748):syncio_tls.c: 1391: Peer cert not accepted (-108), aborting Es konnte keine Verbindung zum Server aufgebaut werden. 3:2020/03/25 10-22-47:aqhbc(14748):dialog.c: 299: Error sending message for dialog (-108) Unable to send (network error) 3:2020/03/25 10-22-47:aqhbc(14748):provider_online.c: 133: Job has errors 3:2020/03/25 10-22-47:aqhbc-tool(14748):getbankinfo.c: 116: Error -1 [Generic error] 3:2020/03/25 10-22-47:aqhbc-tool(14748):aqhbc-tool.c: 275: Error calling control function (3)</pre>			
What could be the reason for that? This happens with very different banks.			
Not sure if this is a problem with the version of aqbanking?			
I already tried to compile the newest version of aqbanking (5.2.0), but i'm stuck here:			
<pre>(make) 1. /usr/local/bin/xmlmerge -v --compact -o accountjobs.xml ./jobgetbalance.xml ./jobgettransactions.xml ./jobgettrans_camt.xml ./jobforeignxferwh.xml ./jobloadcellphone.xml ./jobsepadebitdatedsinglecreate.xml ./jobsepadebitdatedmulticreate.xml ./jobsepacor1datedmulticreate.xml ./jobsepaxfermulti.xml ./jobsepaxfersingle.xml ./jobsepadebitsingle.xml ./jobsepacor1datedsinglecreate.xml ./jobsepastandingordercreate.xml ./jobsepastandingorderget.xml ./jobsepastandingordermodify.xml ./jobsepastandingorderdelete.xml ./jobgetteststatements.xml /usr/local/bin/xmlmerge: error while loading shared libraries: libgwenhywfar.so.79: cannot open shared object file: No such file or directory</pre>			
But /usr/local/lib/libgwenhywfar.so.79 exists...			
Thank you very much.			
Dieter			

Historie

#1 - 25.03.2020 11:58 - DieterK

- AqBanking-Version wurde von 5.99.44 zu 6.1.4 geändert

Same problem with aqbanking 6.1.4 :-(

#2 - 25.03.2020 18:23 - ipwizard

It may exist but is not found by the loader. Die you run **ldconfig** after upgrading? If not do it as root.

#3 - 26.03.2020 02:01 - DieterK

Thanks, i found this problem and the new version is working. But i still can't access my bank accounts :-(

#4 - 26.03.2020 10:37 - DieterK

Example with 6.1.4:

```
1. aqbanking-cli -P /home/banking/data/pinfile request --aid=2 --ctxfile=/home/banking/balance/result_02.ctx --balance
3:2020/03/26 10-35-47:aqbanking-cli(8973):provider_sendcmd.c: 115: Handling user "aapp"
5:2020/03/26 10-35-47:aqbanking(8973):siotlsect.c: 229: Found matching certificate "2B:44:72:60:51:3F:02:E5:59:3B:D2:FC:C9:B7:41:6D"
with same status
5:2020/03/26 10-35-47:aqbanking(8973):siotlsect.c: 255: Automatically rejecting certificate
[2B:44:72:60:51:3F:02:E5:59:3B:D2:FC:C9:B7:41:6D] (-108)
3:2020/03/26 10-35-47:gwen(8973):syncio_tls.c: 1391: Peer cert not accepted (-108), aborting
Es konnte keine Verbindung zum Server aufgebaut werden.
3:2020/03/26 10-35-47:aqhbc(8973):dialog.c: 299: Error sending message for dialog (-108)
Unable to send (network error)
3:2020/03/26 10-35-47:aqhbc(8973):outbox.c: 908: Error performing queue (-108)
3:2020/03/26 10-35-47:aqhbc(8973):job_virtual.c: 277: No segment results
```

There must be some problems with the certs, but not sure how i can reset this problem.

#5 - 26.03.2020 10:49 - DieterK

```
1. aqbanking-cli versions
Versions:
AqBanking-CLI: 6.1.4
Gwenhywfar : 5.2.0.0
AqBanking : 6.1.4.0
```

#6 - 26.03.2020 12:14 - ipwizard

I think I have seen this before (ran into the same scenario). The cause was that I was presented a (new) certificate and pressed 'no' to the question if I want to accept it at the time, because I wanted to check it before I accept it, but did not have the time to do it right away. The assumption, that I will be asked again in a future run was wrong.

I kind of remember that I deleted some information from a file in the ~/.aqbanking directory structure, but I can't remember which one it was. Could be, that it was one of these

```
./shared/certs
./settings/shared/certs.conf
./settings6/shared/certs.conf
```

but I am not sure and might be mistaken. Somewhere, aqbanking/gwenhywfar keeps information about the acceptance of the certificate and you have to get rid of it in order to continue. Maybe Martin can provide more details about the location.

Good idea... Maybe we should not save rejected certificates but only info about accepted certs, that way you would always be asked again for not-accepted certs to accept...

Anyway, regarding the situation at hand: Current versions of aqbanking store the info about rejected certs in the user settings (\$HOME/.aqbanking/settings6/users/*.conf). Look for the cert there and change "int userResponse=x" to "int userResponse=0".

If the cert cannot be found there then it might still be in \$HOME/.aqbanking/settings/shared/certs.conf", just delete that file (you might then be asked again for all the certs in the file to accept them).

#8 - 08.04.2020 16:39 - martin

- Status wurde von Feedback zu Closed geändert

Should be fixed in current versions of AqBanking/Gwen.
